

## Top 10 Best Computer Practices

**Watch out for social engineering.** The most secure network on earth is vulnerable via human weakness! Note the comic below... don't be like Fifi!

- 1) Use antivirus on your computer(s)
- 2) Beware of forwarded emails, even from 'trusted' senders
- 3) Don't just accept random friend requests on Facebook
- 4) NEVER respond to any email by placing your user or financial information where it states you should
- 5) Do not open emails from unknown sources
- 6) Do not post personal information online
- 7) Create secure passwords and do not share them or use the same one for every account you have (add characters, numbers, upper and lower case letters to create secure passwords)

Here, Fifi! C'mon! ... Faster, Fifi!

- 8) Keep your software up to date... patches come out constantly to eliminate loopholes for malware
- 9) Learn from any mistakes you make using the internet
- 10) Most importantly, stay current on known threats – by being an ignorant user you are doomed to share the fate of Fifi!
